

11

A drawing made by G. Gamow
(with photographic insets) which
was hanging in his office in
the Los Alamos Scientific Laboratory
during the dispute about the political
necessity of developing an H-bomb
and during the early stage of its
~~de~~ development after President
Truman said: "Yes, go ahead"

Top left is ^{Comrade} Stalin carrying
the A-bomb made in USSR.

Top right is Dr. Robert
Oppenheimer who ^{was} objecting
against H-bomb project on
the basis that it is extremely
difficult (actually it took less
than # two years) and will
induce USSR to do the same
(actually Russians worked
on H-bomb when this discussion
was taking place).

12

The coffin with the Harvard University coat of arms belong to ~~Professor~~ ^{Dr. James B.} Conant who said that: "H-bomb will be built only over his dead body."

On the bench below are Dr's Stan Ulam, Edward Teller, and George Gamow, demonstrating their proposals for making H-bomb. The symbolism of these devices cannot be explained because of AEC ~~secret~~ classified item as "SECRET".
